 Students outside the academy is called Manabu WEB magazine, which is now in 5th edition with "Student's new world" and "Tracking" as theme. The number of students who have participated in various events has also increased. Additionally, a new format of "Secondary Students" has been introduced. The number of students who have participated in the activities has also increased. The events are aimed to connect students from different backgrounds and encourage them to explore new opportunities. The last event was held in April, focusing on "Science and Technology." The event was attended by around 200 students from different schools. The event included lectures, workshops, and demonstrations on various topics such as artificial intelligence and robotics. The students were also encouraged to participate in hands-on activities and projects. The event was very successful and received positive feedback from both students and faculty members. We look forward to organizing more events in the future to inspire students to pursue their passions and expand their horizons.
